GlobalSign®

Managed SSL Service (MSSL)
Simplify management & deployment of enterprise SSL Certificates

A Complete Enterprise SSL Solution

Managed SSL is a SaaS solution to reduce the effort, cost and time associated with managing enterprise SSL Certificates. The Managed SSL platform was designed around enterprise-specific security requirements and gives access to all types of SSL Certificates. It supports the enterprise's need to host Extended Validation (EV) SSL for public websites and other types of SSL for non-public and internal servers.

- Flexible business terms, including pay as you go, deposit, and unlimited issuance licenses for high volume certificate needs

- Pre-vetted domains for on-demand issuance of certificates

- Centralized certificate lifecycle management

- Delegated user permissions

- Support for multiple entities under one umbrella account

- Delivered through GlobalSign's WebTrust-certified infrastructure with global data centers, disaster recovery, redundancy, high availability and world-class instrumentation protecting the network.

Flexible Business Terms

MSSL offers significant volume discounts over purchasing individual Certificates with no additional hosting or setup fees. Enterprises choose from various purchasing options, including Pay as You Go, deposit method, and unlimited issuance licenses.

Instant Issuance of Full Range of SSL Certificates

Because all domains are pre-vetted, MSSL users can issue all types of SSL Certificates on-demand, including Organization Validated (OV), Extended Validation (EV), Wildcard, and Multi-domain, with options to add Subject Alternative Names (SANs).

Integration with Active Directory (Optional)

The Auto Enrollment Enterprise Gateway acts as a connector between GlobalSign's services and an enterprise's Windows environment, allowing organizations to easily register and provision SSL Certificates to devices, including servers, domain controllers, and machine certificates.

Scalable for Organizations of All Sizes

GlobalSign offers unique features and functionality that make it easy to manage your certificates no matter how large or distributed your organization.

Unlimited Organization Profiles

Register multiple departments, locations, and business units under one account by creating "profiles". This option allows all activity to be monitored, managed and centralized from one account.

Unlimited Account Users

Define user roles and privileges for users within your institution based on specific profiles, or even specific domains within a profile, giving you full control over which staff members can apply for, approve, renew, and revoke certificates. Organizations can add as many users as necessary without incurring additional fees.

Multiple Application Methods

Organizations can choose from a variety of SSL application methods. Regardless of application method, all orders must be approved by a user with approval rights before the certificate will be issued.

- Direct Orders - Users with purchasing privileges can place orders directly in the MSSL platform.

- XML-based API - This method allows for full integration with the organization's existing purchasing systems.

- Public Ordering Page - Allows anyone within the organization to place an order. The page is highly customizable and can be password protected.

First Class Support

GlobalSign is a pure-play Certificate Authority. Unlike some companies that offer SSL as a secondary product, you can be sure your certificate needs won't be overlooked. Our Dedicated Account Managers are available via phone, web, and email to help with product selection, expedite support questions, and advise on security initiatives.

Post Issuance Services

All GlobalSign SSL Certificates come with phishing alerts and optional malware monitoring. GlobalSign's SSL Configuration Tool checks your servers for SSL vulnerabilities and provides actionable remediation advice.
